

CONCIERGE MATCHMAKING

Meet Cute

Quick Start

An invite-only, matchmaker-run introduction service.
No swiping. A human curates *one* introduction at a time,
both people opt in, and a concierge books the first date.

LIVE APP

meetcutehq.com

PREPARED

June 21, 2026

Everyone signs in the same way: a passwordless magic link sent to their email. What you can see is decided by one flag on your account. Members get the app, operators get the studio.

01 Two surfaces

SURFACE	URL	WHO	WHAT THEY DO
Member app	<code>/app</code>	Applicants & active members	Build a profile, review one curated suggestion at a time, opt in or pass, get a date booked, vouch for friends, manage safety and privacy.
Matchmaker studio	<code>/studio</code>	Operators only	Vet applicants, search the roster, create suggestions, run the pipeline, moderate photos and reports, manage the team, use the AI co-pilot.

Members can never see or reach the studio. Every `/studio/*` route redirects non-operators to `/app`, and every operator action is enforced server-side.

02 Member workflow

- 1 **Apply** at `/apply`: enter email, click the sign-in link.
- 2 **Complete the application**: name, date of birth (18+ gate), city, what you are looking for, and consent to Terms and Privacy.
- 3 An operator **vets and approves** you (status goes `applicant` to `active`).
- 4 **Build your profile** at `/app/profile`: headline, bio, what you are looking for, deal-breakers, and photos (reviewed before others see them).
- 5 **For You** (`/app`) shows **one** introduction at a time with the matchmaker's note on why. Choose **Yes, introduce us** or **Not this time**.

- 6 If **both** say yes, it becomes mutual and the **concierge** takes over in `/app/matches`: it proposes a venue and specific time slots; when your picks overlap it confirms and sends a calendar invite.
- 7 **Safety and privacy** in `/app/settings`: block or report anyone, export your data, or permanently delete your account and all its data.

03 Operator workflow

- 1 Sign in: you land in `/studio`.
- 2 **Roster** (`/studio`): search and filter members; vet applicants (approve to active, or decline).
- 3 **Person view** (`/studio/person/[id]`): full history, notes, mutual-friend graph; one-click create a suggestion with a rationale.
- 4 **Pipeline** (`/studio/pipeline`): every match from suggested to together; see who is waiting on whom.
- 5 **Events** (`/studio/events`): create a dinner or gathering (theme, venue, city, date, capacity), then **one-click add invitees** from the roster; each checked member is added and **emailed automatically**. Manage RSVPs (invited, confirmed, attended, no-show) on the event page.
- 6 **Moderation** (`/studio/moderation`): approve or reject pending photos; resolve safety reports.
- 7 **Co-pilot** (`/studio/copilot`): your command line for the platform. As well as answering questions over the roster and notes, **typed commands run for real**:

Match Maya and Alex

Invite Maya and Alex to the next NYC dinner (adds and emails them)

Create a NYC dinner at Via Carota on 2026-07-12 7pm

Book the date for Maya

Approve Maya's photos · Close the match for Maya · What needs my attention?

8

Team (`/studio/team`): add another operator by email (sends them a sign-in link) or revoke access. You cannot remove yourself or the last operator.

04 Logins & testing

Everyone signs in with a magic link. For accounts whose inbox you do not control (such as test accounts), mint a **direct one-click link** instead (single-use, expires in 15 minutes):

```
npm run login-link -- jesswolflord@gmail.com # operator → /studio
npm run login-link -- maya@meetcute.test      # member  → /app
npm run login-link -- alex@meetcute.test      # member  → /app
```

SEED / RESET THE TEST SCENARIO

```
npm run test:fixture
```

Creates two members (**Maya Rosen** and **Alex Chen**) and one curated suggestion between them, reset to a clean "both undecided" state. Walk it:

- 1 Open Maya's link: on **For You** you will see Alex suggested with the matchmaker's note. Click **Yes, introduce us**.
- 2 Open Alex's link: he sees Maya, clicks **Yes, introduce us**. It is now mutual.
- 3 Either member's **Matches** tab shows the concierge proposing a venue and time slots. Pick slots on both sides to see it confirm and send the invite.
- 4 Open Jessica's (operator) link: **Studio** to **Pipeline** shows the match advancing; **Roster**, **Moderation**, and **Team** are all here.

MANAGE OPERATORS

```
npm run ops -- list  
npm run ops -- add you@email.com "Your Name" NYC # or use /studio/team  
npm run ops -- remove someone@email.com
```

05 Production notes

Photo uploads at scale: set `BLOB_READ_WRITE_TOKEN` (Vercel Blob) as a Fly secret. Without it, uploads fall back to local disk on a single machine.

Schema changes: apply with `npm run db:deploy` (never via the build).
